

Do something with a **meaning**. Work for an **international startup** company. **Change the world** for the better. If that's what you want join us as **Lead Architect**.

WE are ...

an ambitious FinTech startup located in Frankfurt/Main. Our mission is to enable credit information sharing in the African microfinance industry to provide access to finance for anyone. We have won several FinTech and ICT awards and an incubator scholarship. Reputable partners and advisors back our operations. For more information visit www.awamo.com.

Gefördert von: **KFW STIFTUNG**

WE need ...

a highly motivated and experienced

Lead Architect (m/f)

at our headquarters in Frankfurt/Main to support our platform development.

YOUR challenges ...

- * set up and lead the IT team (incl. recruitment, tooling and initial process definition)
- * lead the technical product development in coordination with the product development team
- * set up and maintain the full toolchain for the project (server components, open source platform, Android application)
- * set up the production environment and define the deployment process
- * take on initial responsibility for IT platform operations
- * organize system operations and ensure system security, availability, and performance
- * coordinate external IT suppliers
- * organize, run, and monitor day-to-day IT operations
- * enforce compliance with data protection requirements
- * directly report to the Chief Product Officer

As we are a startup, your responsibility will also include support for our office IT infrastructure (email, file server).

YOUR expertise ...

- * 3 - 5 years working experience as a technical lead/architect
- * experience in team leadership
- * financial industry experience (core banking, transactions), additional emerging markets experience is a plus
- * passion for agile software development
- * experience with several of the following technologies:
 - ⇒ JEE, Spring, Core Java, REST services
 - ⇒ APIs for mobile clients with offline capabilities
 - ⇒ business intelligence and data mining tools
 - ⇒ hands-on experience with fingerprint biometry
- * DevOps: build management and continuous integration
- * test, config, change management in agile environments
- * transforming business requirements into technical decisions
- * structured work approach
- * high degree of self-organization
- * capability and willingness to make decisions
- * fluency in English, German/French is a plus

WE offer ...

- * a highly motivated and professional team
- * responsibility and room for your expertise
- * the chance to create a new platform from scratch
- * an attractive technology mix: mobile, biometrics, big data
- * a reasonable fixed salary
- * a very attractive bonus component
- * flexible office hours including home office
